

Testimonial & Social Proof Collector

Senja / Testimonial.to Alternative

🔒 Universal Security & Architecture Requirements

- **Pair Token Auth:** Short-lived JWT Access Token (15m) + Long-lived Refresh Token (7d) in `httpOnly` cookies.
- **Auth Features:** Signup with Email Verification simulation, Login with token rotation, Forgot/Reset Password.
- **UI Standard:** Build all interface components using coss.com/ui primitives.

1. Overview & Goal

Build a customer review platform allowing business owners to launch branded collection pages, gather reviews/ratings without client logins, manage submissions via a moderation inbox, and generate embeddable widgets.

2. Technical Feature Specifications

A. Space Management & Configuration

- Authenticated owners create "Spaces" with unique slugs (e.g., `/collect/acme-corp`), brand logos, and custom prompts.
- Settings: Mandatory avatar toggle, star rating toggle, custom questions.

B. Frictionless Public Collection Form

- Public URL (`/collect/:spaceSlug`) accessible **without logging in**.
- Form capturing client name, email, company role, 1–5 star rating, review text, and avatar upload.
- Client-side validation and file upload handling.

C. Review Moderation & Tagging Inbox

- Owner dashboard with tabbed review filters (*All, Pending, Approved, Archived*).
- One-click moderation controls: Approve, Reject, or mark as *Featured / Liked*.
- Keyword search and star-rating filters across submissions.

D. "Wall of Love" Showcase & Embed Generator

- Public responsive masonry grid page (`/wall/:spaceSlug`) displaying approved testimonials.
- **Embed Generator Modal:** Allows owners to customize theme and layout (*Grid, Carousel, Badge*), producing a copy-paste HTML / `<iframe>` embed snippet.

E. Rating Metrics & Summary Stats

- Summary stats card displaying average star rating, total review count, and star-distribution breakdown.

3. Deliverables Checklist

Area	Deliverable Criteria
Auth & Security	Pair token JWT auth for space owners, open public submission endpoints.
Data & Media	Mongoose schemas (Space, Testimonial), image upload handling, moderation flow.
Frontend	Coss UI components, star rating selector, masonry Wall of Love, embed generator.
Repository	Clean GitHub repo, <code>.env.example</code> , API documentation.
